

DESKSURFER – Height Adjustable Work Platform

RE: EMERGENCY RESCUE

Should a person need rescuing the winch mechanism can be used for lowering the platform, with the person on-board, to the lowest platform height setting of the respective Desksurfer models designated as 42UM or FM, 49FM, 55FM & 60FM. (Model 35 is a low height unit without a winch).

NOTE:

The above is a one off procedure and after the emergency rescue, the Desksurfer must be quarantined (not be used) & returned to our factory for a thorough check. This check will include re-aligning the mast; changing the winch wire; inspecting & if necessary changing the winch; checking all fastenings & joints; servicing all moving parts; proof load testing & re-issue of new Certificate of Conformity; signed & dated Service/Inspection label certifying NO Defects.

Should your Desksurfer be used for an emergency rescue as related above, then contact us to arrange collection for the above mentioned thorough check to be carried out.

Cost for collection: Price on application.

Cost for the thorough check etc.,: Price TBA after assessment.
